

Web & Graphic Designer

BIO

I am a Freelance Web and Graphic Designer with a passion for clean, user-friendly, grid based websites who absolutely loves his job. Helping clients stay up-to-date on the newest web technology and design trends to create websites with beauty.

My career path into the design world all started with me learning the basics of html one afternoon from my dads bookshelf and this was all that I needed to launch my web design career, and I haven't stopped since.

For the past 4 years I have been involved in 100+ web projects ranging from small to medium sized businesses, creating everything from logos, websites, user interfaces, brochures, business cards, video & photo editing, flash add banners and email newsletters.

Fun Facts

Constantly trying make it better / loves exploring / obsessed with details & typography (not enough padding drives me crazy) / Inspired by all forms of design / hates IE / keen eye for simplicity / big advocate for web standards / has a crush on responsive design / middle name is Robert

Hobbies

I'm naturally a tech geek and loves anything to do with computers and devices. When I'm not pushing pixels and learning all there is about web design you can find me travelling around Asia, learning Japanese and dabbling in photography.

Web & Graphic Designer

OBJECTIVE

A confusing, poorly designed website will miss its target almost every time.

In a world where data flows constantly, our minds have developed filters to sift through the overflow of useless and badly designed websites.

Design must appeal to our senses, it must not stand in the way, cause complications. Design should simplify and facilitate our everyday life, enable us to accomplish our tasks more effectively, with the tools had hand I want to make technology easier and more pleasant to use.
